Designed in accordance with ergonomic principles, while fully utilizing the limited office space

## B4|B7 detail display

Screen  
Partition

PRODUCT

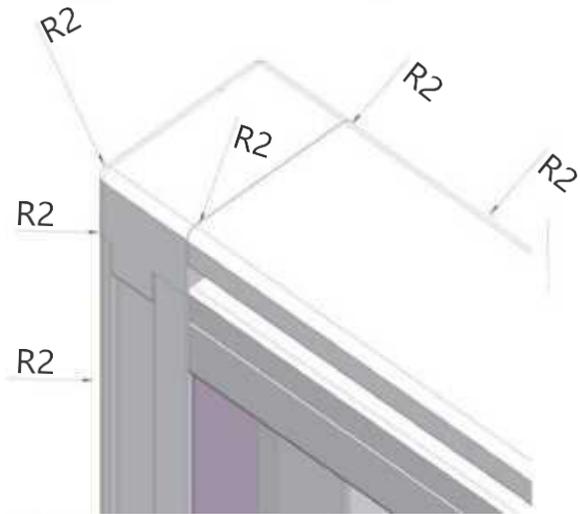

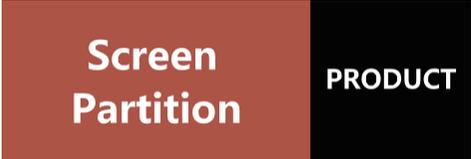

B4: 43mm

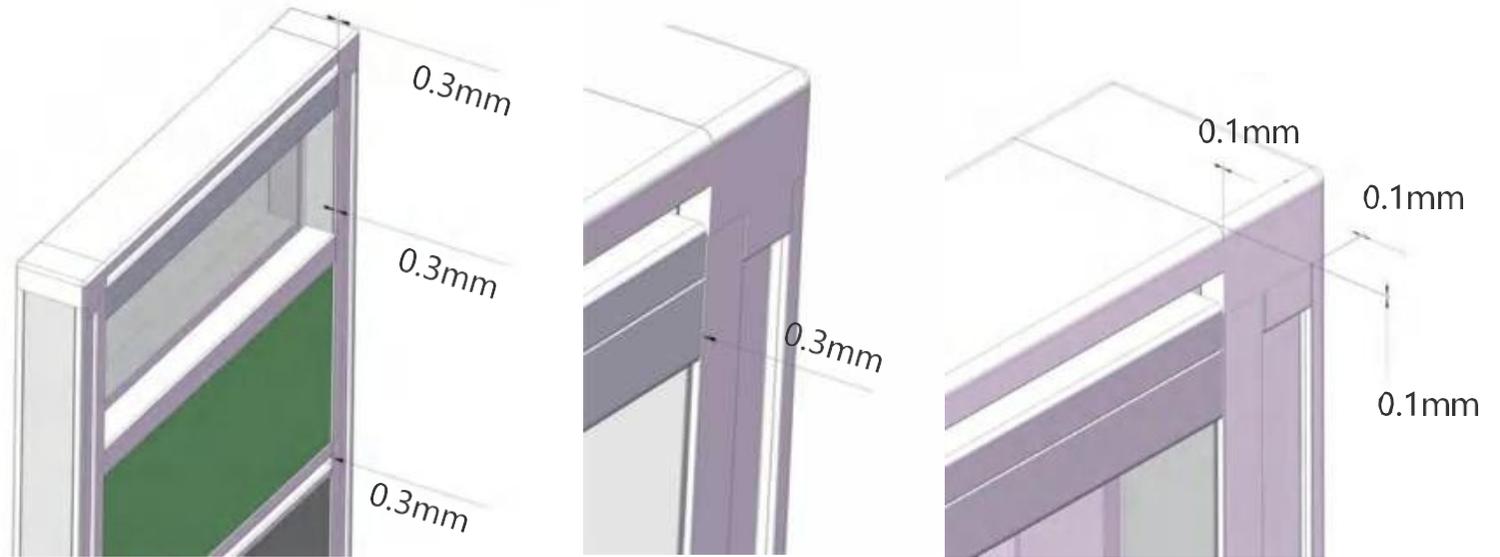

B7: 70mm

Two border colors,  
Stylish white and  
silver oxide white  
Joints are square,  
edges are smooth,  
and corners are  
rounded

## B4|B7 Safety (appearance)

All edges and corners that can come into contact with the human body are rounded with a national standard R2 arc to ensure the safety of human contact as much as possible.

The joints are 0.1mm higher than the horizontal/vertical aluminum material, and the vertical aluminum material is 0.3mm higher than the horizontal aluminum material. All cutting surfaces of the aluminum material are completely wrapped, avoiding potential injuries when in contact with the human body and also providing a better user experience.

# Cable management

B7-P5 Wire board frame

B7-P1 B7A Column wire protection sleeve

# Cable management

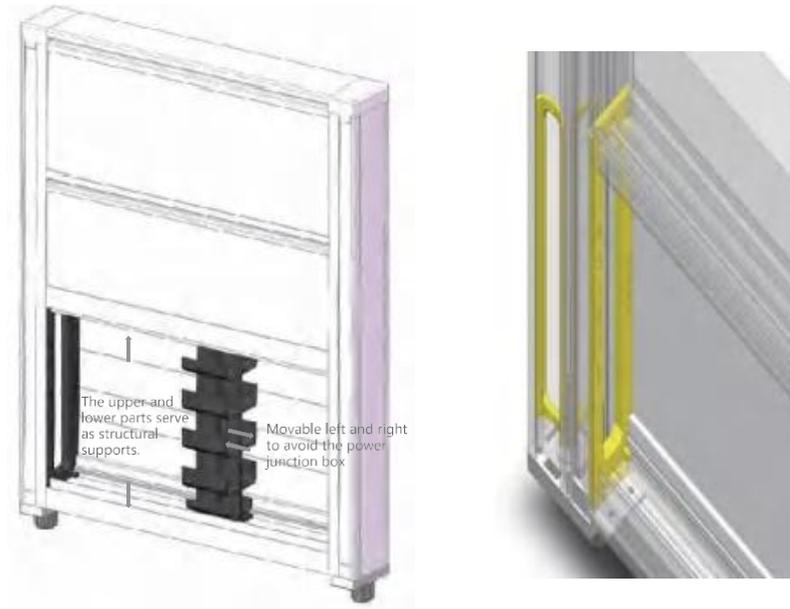

Tool-free disassembly and assembly without damage

Move the wiring duct plate up

Rotate the wiring duct plate outward

Move the wiring duct plate down

The yellow parts show the ABS material A-pillar wiring protection sleeve and the link post wiring protection sleeve respectively.

Theoretical maximum wiring capacity: 60/100 network cables

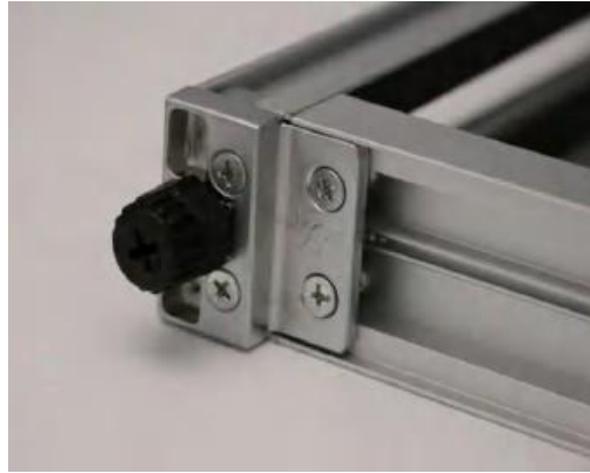

# Structural safety

Screen  
Partition

PRODUCT

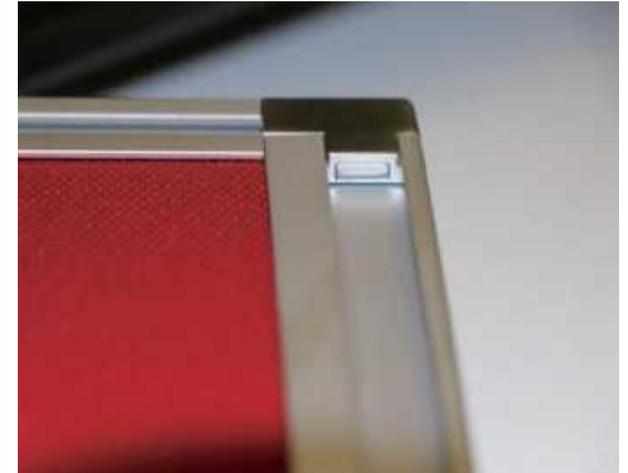

The top rod connector links the top horizontal aluminum material with the vertical aluminum material

The foot connector links the bottom horizontal aluminum material with the vertical aluminum material, and supports the entire bottom horizontal aluminum material. The bottom of the adjustment foot is designed with a cross-shaped pit, which facilitates adjusting the height with a screwdriver.

The maximum adjustment height of the adjustment foot is 45mm

Long strip-shaped pits are used as the force position for a flathead screwdriver when disassembling an assembled employee station, to push out the joint and protect the joint from damage due to repeated disassembly and assembly while maintaining surface quality.

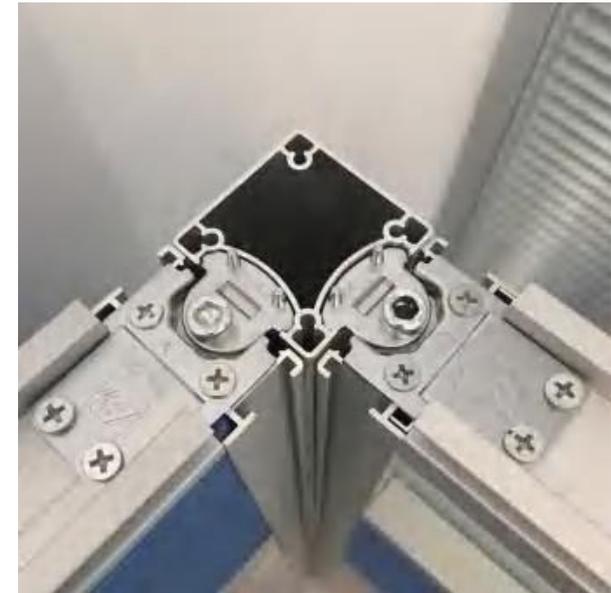

# Installation method

The Famous Workstation Furniture Brand

Screen  
Partition

PRODUCT

Convenient installation, simple tools (only one tool needed - an Allen wrench)

1+7

# Side foot pull code installation

Joint mounting

## B4-P3 Pull Code

Developed independently, it is a connecting accessory used for the connection between the screen A-pillar and the wooden side plate or steel leg. It is easy to assemble and can greatly enhance the stability of the connection between components.

1. Fix the pull code to the side leg with two 4\*16 self-tapping screws;

2. Clip the side leg with the installed pull code onto the screen A-pillar;

3. Complete the installation

# BLOCK

## Blog steel buckle screen

### Design concept

With a low-key and stable appearance, clear internal layout, exquisite craftsmanship, high-end materials, and rich configurations, it is a perfect combination of classic craftsmanship and modern technology. Its unparalleled safety, humanized detail craftsmanship, and low-key appearance design have set a new benchmark.

## All-steel frame structure

The main frame of the screen is welded from steel pipes, stable, fireproof, safe, and environmentally friendly.

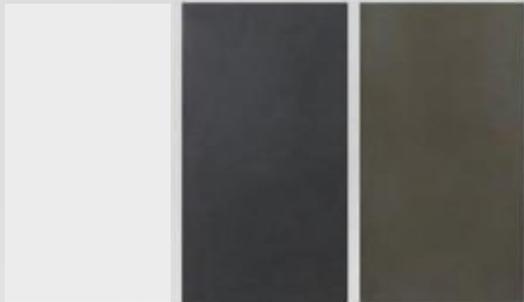

The screen connection column is made of steel pipe, the edge sealing is aluminum profile, and the side cover and column cover are zinc alloy die castings.

## Aluminum alloy frame

Aluminum alloy frame thickness: 40mm / 60mm

Aluminum alloy wall thickness: 1.2-1.5mm

Available colors: 3 colors - Elegant White | Gray Shinesilver | Brown Shinesilver

Elegant White   Gray Shinesilver   Brown Shinesilver

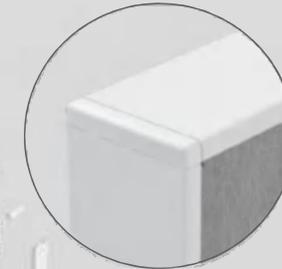

**Connection column**  
1.5 wall thickness  
steel pipe

According to the placement, it is divided into 40\*40, 40\*60, 60\*60

**Column cover**  
Zinc alloy die casting

**Edge sealing**  
Aluminum profile

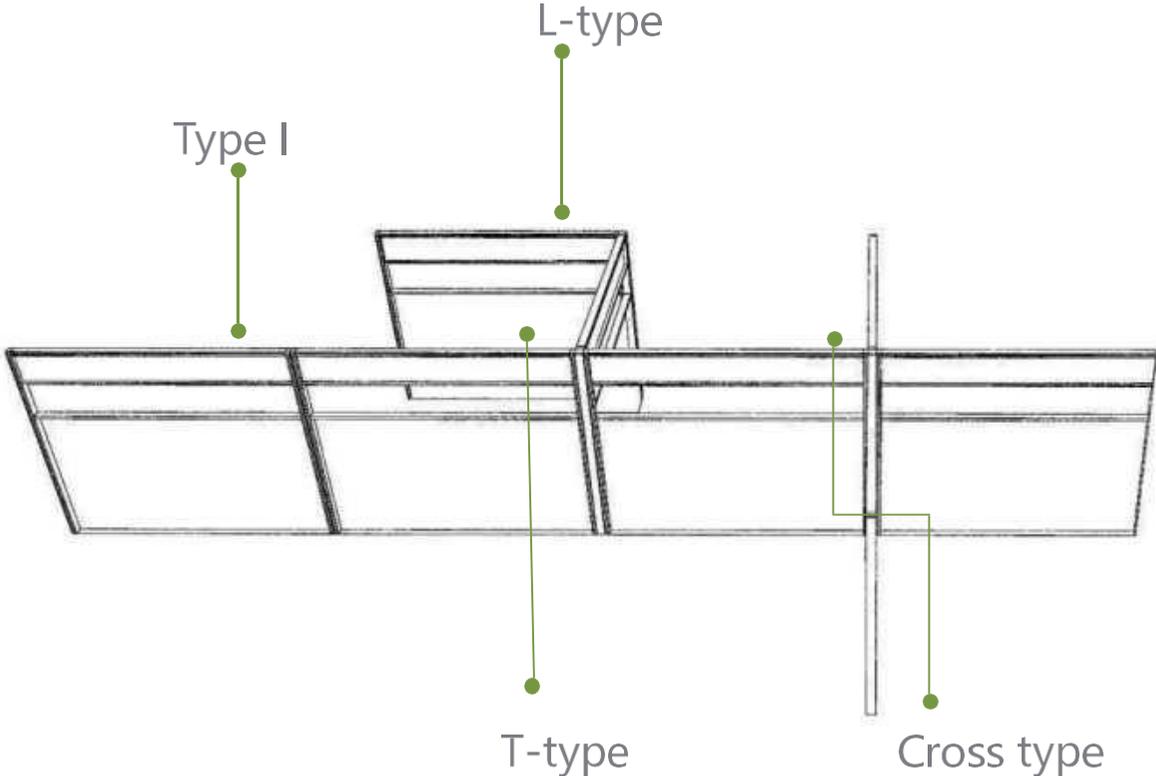

**Side cover** Zinc alloy die casting

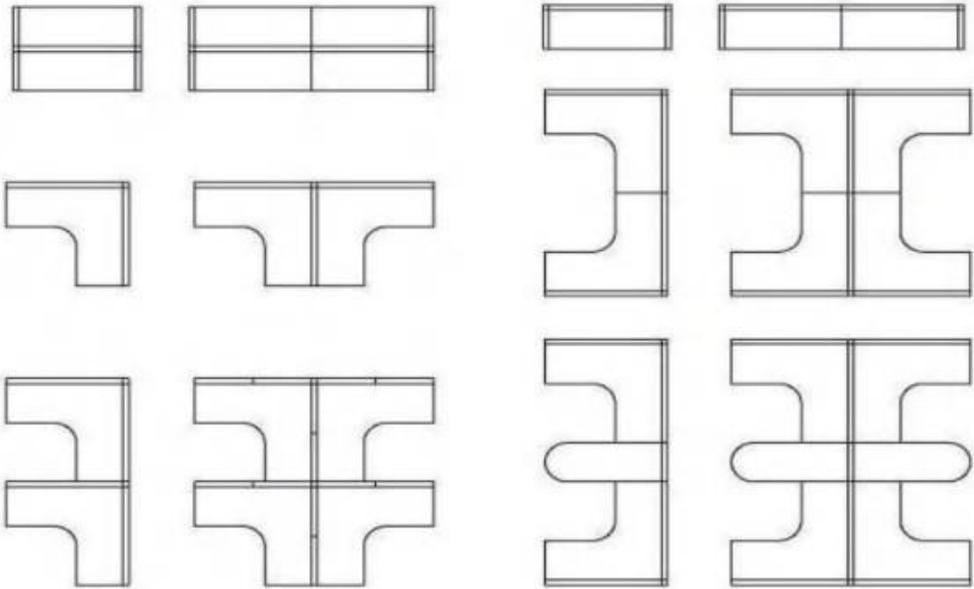

# Combination method

Can be used for conventional straight, L-type, T-type, cross connections, as well as various height difference connections

## Multiple combination

PS: Cannot make a 120-degree connection

# Screen module

One type is a steel frame module, with 0.8mm steel plate bent and conventionally sprayed. The other type is a steel frame covered with fabric, with 0.8mm galvanized plate bent and single-sided covered with fabric.

**P.S.: Both can magnetically attract objects**

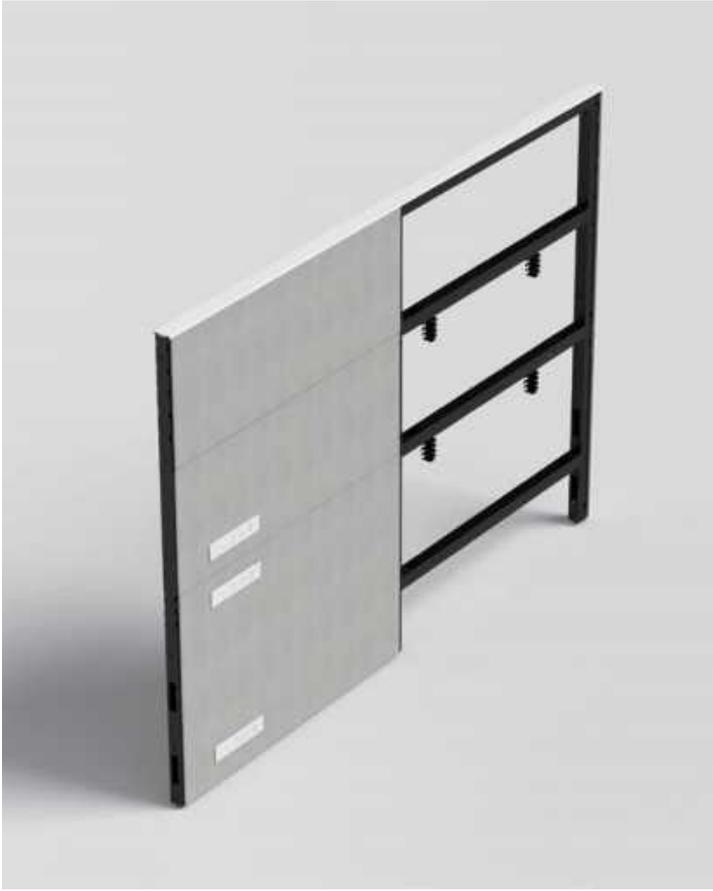

Steel frame module

Fabric upholstered steel frame

# Cable management

Ultra-high capacity wiring, strong and weak electricity can be separated, integrated, and connected in all directions

# Module assembly and disassembly

The facing of the screen can be disassembled individually

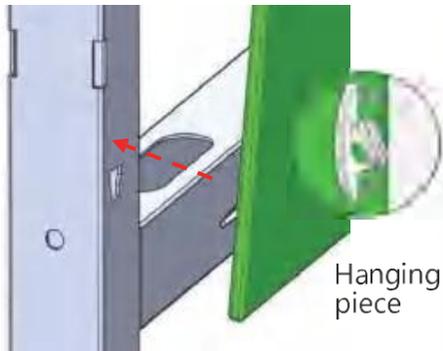

Abandoning traditional complexity and simplifying it, adopting a hook-type connection, installation is quick and simple, the gap at the interface connection is uniform, beautiful, greatly saving labor costs, connection without screws, can be disassembled and assembled multiple times without tools, which is convenient and without loss.

## Connection only

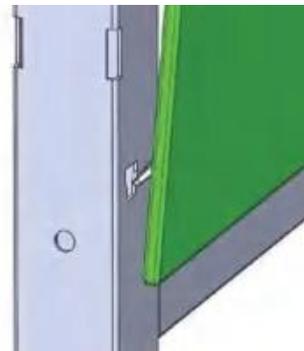

takes 2 steps:

1. Insert

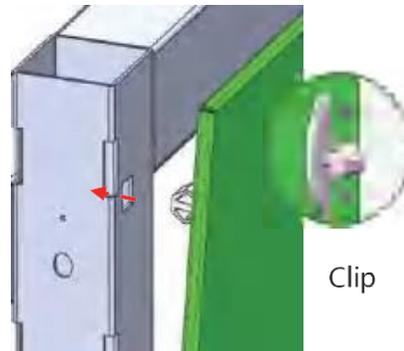

2. Snap

1. Determine the direction of the module, the clip is on top, the hanging piece is below

2. Slightly tilt the module, first insert the bottom clip into the hole

3. Press the top clip into the steel frame hole

Just one warped piece, easily snapped down

## Rich configuration

Magnetizable

Can hang TV

Can place power supply

Can be paired with a nap bed

Can hang universal stationery

## HORI sofa

Inheriting the design inspiration from the HORI desk series, it extends horizontally in proportion, presenting an exterior that is rigid yet soft, rational and sharp, yet sensual and harmonious. The exterior resembles solid and square rocks, while the interior is as comfortable and soft as a pillow. The base is hollowed out, giving it a light and grand presence. The mix of luxury materials such as stone patterns, wood grain, high-quality leather, and silver alloy highlights a distinguished taste.

Combining rigidity with softness, it accommodates both business elegance and human warmth. Breaking away from the traditional proportions of executive sofas, it integrates a sharp rectangle with light and tall legs, while fluffy cushions and thin layered boards envelop each other, achieving a balance of heft and lightness, harmony and unity.

Conference table

# Table System

A 4-sided frame plus 4 legs support the tabletop, sturdy and durable.

Patented fully covered hanging central cable trough, aesthetically pleasing and easy to maintain.

SU-WS-Parco-1 | ParcoSingle table

SU-WS-Parco-14 | ParcoSingle row 2-person seat

Optional cable trough (centered at the back/horizontally at the edge)

The PARCO desktop multifunctional profile features built-in power cabling, a top-mounted partition screen, middle-hung accessories, and a central gap for routing cables to support monitor stands, desk lamps, and sockets. A variety of materials are available for the desktop screen, and the L-shaped hanging desktop screen provides additional focus and privacy support when needed.

The cable trough is connected by hanging, eliminating the need for screw fixation.

The cable trough can accommodate power modules.

Desktop power module

## Movable single desk

Optional black silent wheels or fabric privacy screens; flexibly suitable for various spatial usage scenarios.

PT-M1 | ParcoMovable single desk

## Cable box

You can choose from our company's standard cable boxes. Since it is a mobile desk, it is recommended to use an adhesive desktop power supply, or choose a lifting/flipping hidden power cord box.

## Suspension privacy screen (optional)

Or you can choose our company's regular suspension privacy screen (custom hanging code required):

1. With an L-shaped suspension privacy screen, the corresponding corner of the tabletop needs to be chamfered R20.
2. Dimensions of the L-shaped privacy screen:  $\text{tabletop length}/2 + 20\text{mm} * \text{tabletop width}/2 + 20\text{mm}$   
\* 700H (400 above the tabletop), custom sizes are available.

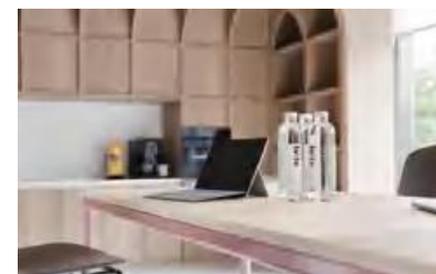

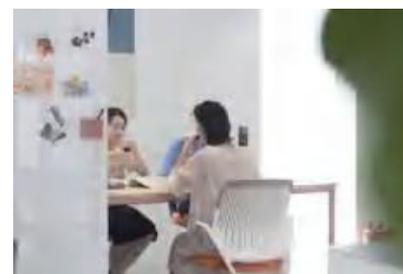

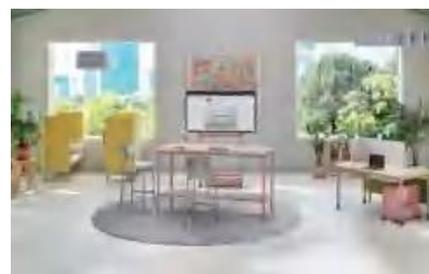

3. L-shaped suspension privacy screen craftsmanship: 12mm multi-layer board frame (solid) + inner 5mm EVA + outer 3mm EVA + fabric, total thickness 20mm.
4. Color: Our company's standard fabric texture color.

## BAR COUNTER

Customers sitting at any angle can receive quick service, as well as a place for users to sit down and relax.

SU-DT-Parco-69  
*Parco bar counter*  
W2400\*D1200\*H1050

## Cabinet System

Provide models that support both personal storage and team collaboration, meeting the needs of individuals and teams simultaneously.

Columns and sheet metal are fully welded as a whole, with exquisite craftsmanship, lightweight and sturdy, environmentally friendly and durable.

Open design, unobstructed view. Hollow patterns combine beauty and functionality for hanging tools and accessories.

SU-OS-Parco-114 | PARCO Double-door movable  
W500×D280×H550

SU-OS-Parco-115 | PARCO Single-drawer movable cabinet

## Collaboration Tool System

Create a space atmosphere according to the needs of different stages of work content, and combine products such as whiteboards and tackable boards to achieve visual and auditory privacy adjustments.

Mobile tilting partitions and media support brackets can support the display and storage of whiteboards and tackable boards needed for small team meetings. They are dual-sided, support horizontal and vertical placement, and feature a combined handle and hook design. They can also be used as multimedia device brackets to connect TVs and other remote collaboration equipment.

A collaborative tool storage cart with a large capacity for storing whiteboards and tackable boards needed for medium-sized team collaboration and meeting space arrangements. It can also store other stackable/foldable tools/products, such as pencil cases, whiteboard erasers, folding chairs, and portable power banks.

KYLLINC

# Main functional forms and applications

With the Keystone framework as the core, the built-in power supply/cable management capabilities provide the basic power for interconnection. With the cushion, it supports rest and leaning. With the SOURCE whiteboard and display stand, it supports sharing and remote collaboration. With the low cabinet, it supports storage and display. With large and small desktops, it supports work and social interaction. With casters and handles, it supports movement and storage. From personal leisure charging to team assault tasks, it can provide flexible support to meet the needs of knowledge sharing, sitting and leaning, standing discussion, social meetings, and team collaboration.

## Forms & Descriptions

## Modular

The Kyline cart can carry accessories such as writing boards, screens, and TVs. It breaks free from the constraints of time and place, allowing work to move with people and making creative sharing more intuitive and versatile.

# Restart office space

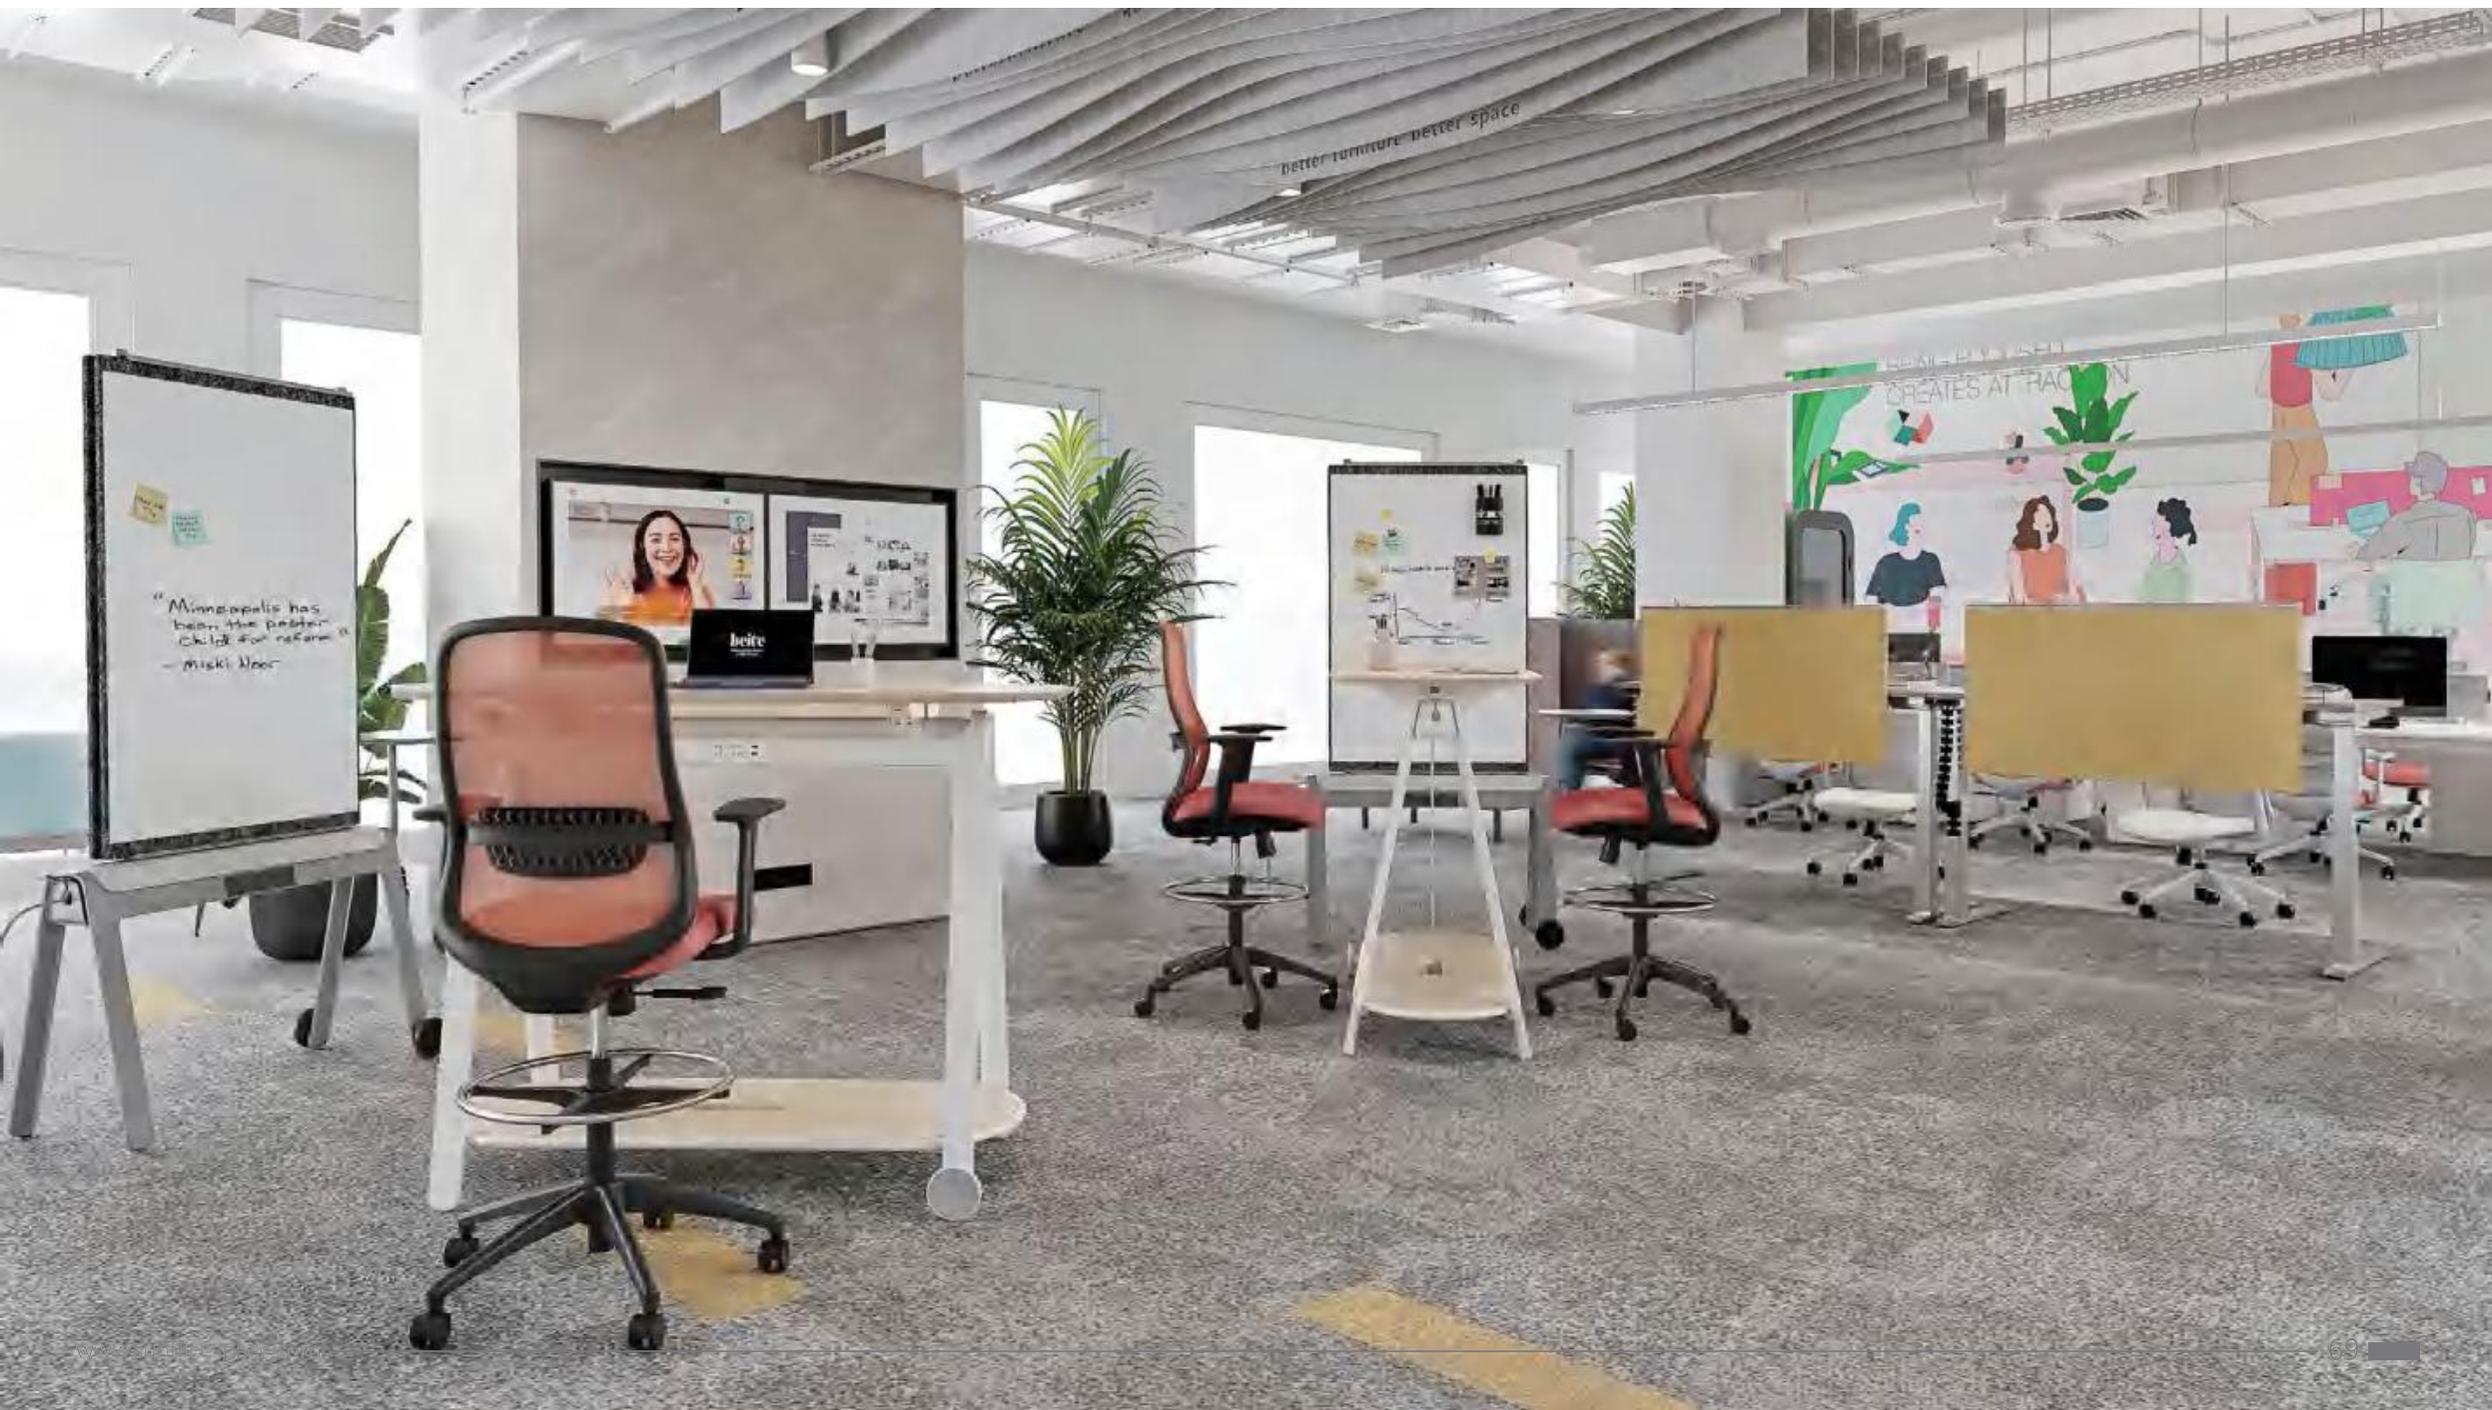

Teams can reconfigure the Kirin combination to meet different needs and activities: workshops, brainstorming, focused thinking.

Two height options available

Large-sized movable wheels, as smooth as walking on flat ground; combining stability and quick movement. Equipped with fabric handles for convenient and flexible movement. The fixed feet have an adjustable height function to adapt to various floors.

# Multi-functional writing board

Adjustable 360° rotating writing board with a steel plate connection at the bottom, high strength, and durability. Hooks are designed at the lower end for easy hanging of backpacks or clothes.

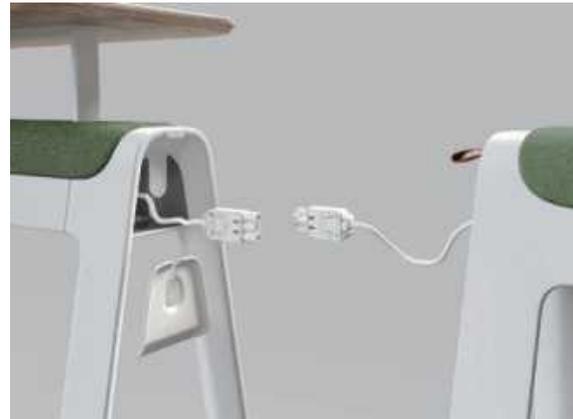

# Cable management

Power/cable management and storage, convenience of connection, convenience of movement

Comes standard with two small white cable

Adjacent two Kirin can be quickly connected through male and female plugs

Conference system comes standard with a cable box, making it more convenient to draw power from the desk.

Design of wire winding space behind the end cap for storing excess cable length

System

PRODUCT

- The key handle is made with Microban technology, offering 99% mold resistance. The slanted edge craft replaces the handle. The drawer uses three-section rails with self-locking function. The third drawer uses a 17-inch three-section rail with a full display design. Aluminum alloy file rack tracks. The mobile cabinet is equipped with a "fifth wheel." The floor adopts a fully enclosed design. The overall load capacity is not less than 150KG.

# Steel drawer mobile cabinet

## 1. Quick retrieval design, easy to get items:

The third drawer features a quick retrieval design, compatible with both A3 and A4 sizes, and achieves full display.

## 2. Pen holder matching, multiple uses:

Not just a storage tool, but also can be paired with a pen holder, adding more functional area division and beauty.

## 3. Lightweight and flexible, do as you wish:

The steel plate material is lighter and more durable, paired with movable wheels, allowing you to use it anytime and anywhere.

## 4. Safety lock design, double protection:

Using a new lock system, only one drawer can be opened at a time, preventing the cabinet from tipping due to too many drawers being opened; combined with the five-wheel design of the third drawer, it forms a double insurance, providing the most reliable protection for your valuables.

## 5. Three-section rail design, smoother opening and closing:

All three drawers use DuPont's three-section rail design, ensuring that each opening and closing is as smooth as silk.

## 45N/50D High-Resilience Foam

The cushion features 5cm of high-resilience foam support, combined with a 3cm high-resilience contouring layer for the hips. It offers a soft, elastic feel with a pronounced layered wrap effect.

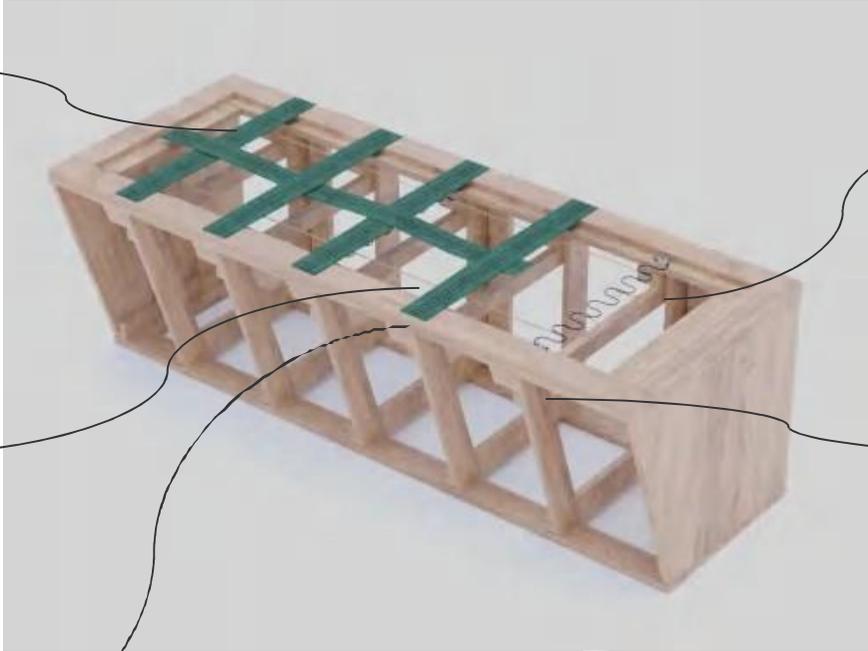

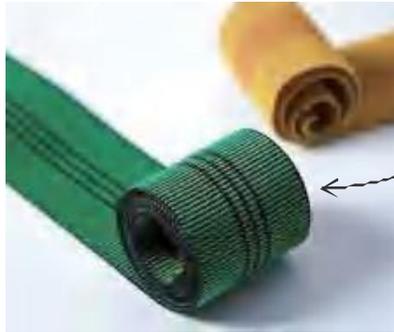

## Parallel Positioning Lines

The steel wires undergo heat treatment for improved toughness. Kraft paper effectively eliminates noise and connects the springs in the seat into a unified structure, enhancing the springs' elasticity and improving the sofa's seating comfort.

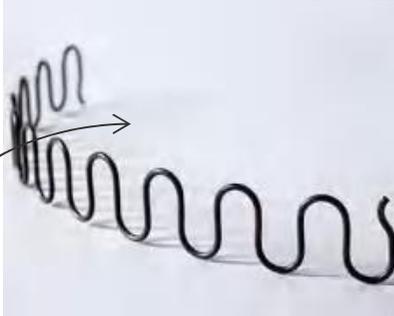

## High-Density Rubber Bands

5 cm wide elastic bands effectively enhance seating comfort and ensure even distribution of force on the springs.

Bottom schematic diagram

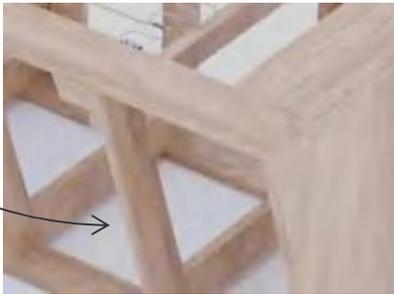

## Serpentine Spring Coupling

Imported 3.8mm Diameter Arch Springs, good elasticity, overall improvement in seating comfort, high load-bearing capacity, and durable without deformation over long-term use.

## Mortise and Tenon Structure

The sofa frame structure uses a mortise and tenon solid wood framework.

## Imported Eco-friendly Wood

The backrest is made of imported high-quality eco-friendly 12mm curved plywood. The entire wooden frame is constructed from imported New Zealand pine, which has been steamed, treated to prevent insect damage, and is free of noticeable knots and blemishes.

Ergonomic Chair

## Seamless full fit of waist and back

Single frame and shoulder support design, fitting the back curve, fully utilizing the toughness of plastic with back stretching function

## 10 degrees of comfort

The initial angle of the chair is

**10** Degree

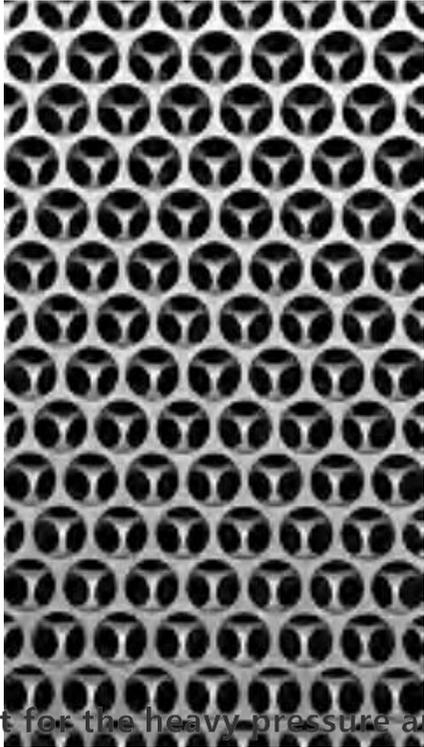

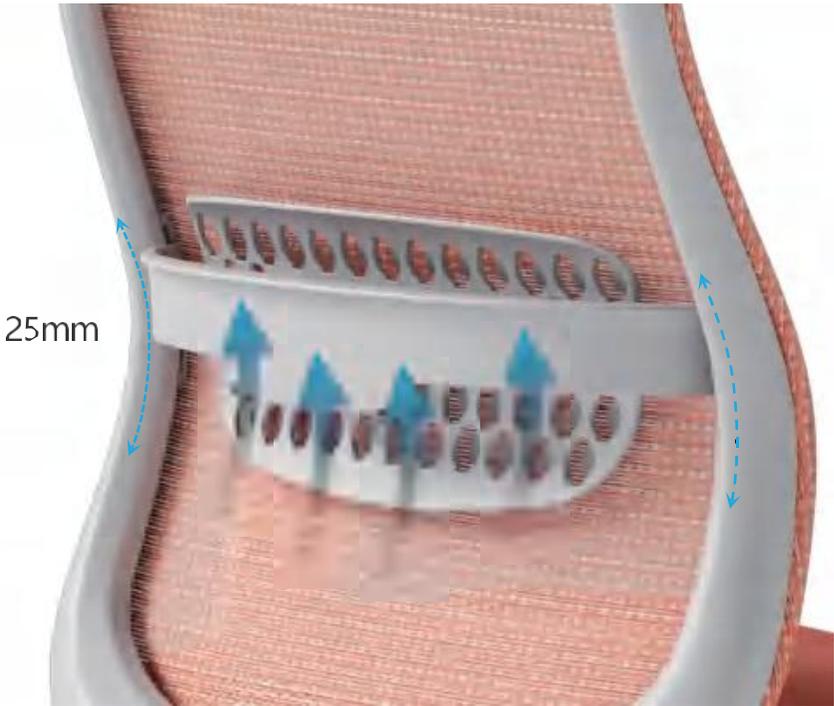

10 degrees is the most suitable for entering the working state, protecting the human spine

# Bionics design

Bionic honeycomb-style lumbar pad design, new material soft rubber, floating double-layer design, more human comfort.

and

Two-tone design, up and down lifting adjustment.

**Specially designed C-shaped arc-shaped lumbar support for the heavy pressure area of the waist, helping to release lumbar pressure**

PS: The basic models do not come with a lumbar support

# Breathable mesh fabric

The seat surface is made of breathable special mesh, which is refreshing, comfortable, highly elastic, and has strong tensile strength.

Maintain air circulation, stay fresh even after sitting for a long time

## Using CF-A special mesh (including 0.5mm hytrel reinforcement)

CF-A series special mesh, TPEE diameter 0.5, seat and back can be universal, impact more than 10W times. Passed CA117 US standard fire test

Hytrel is a thermoplastic polyester elastomer developed by DuPont, with good mechanical and physical properties, including unimaginable toughness and elasticity, creep resistance, impact and flexural fatigue resistance, low temperature flexibility, and maintaining good performance at high temperatures, capable of resisting a variety of industrial chemicals, oils, and solvents.

# 3D multifunctional headrest

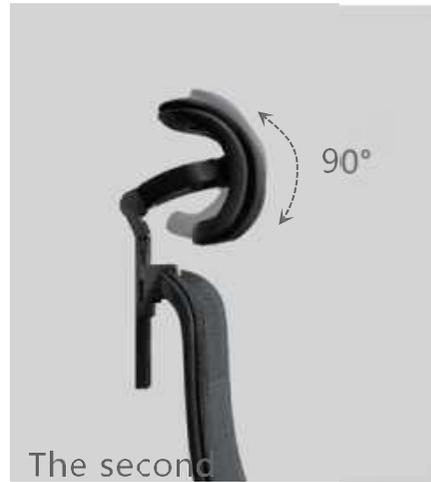

Large curved surface design, flexible fitting of head and neck curves

Height adjustment (10 levels)

The first section rotates 75 degrees

The second section rotates 90 degrees

# Multifunctional armrest

Support arms, relax shoulders. Large contact surface, not easy to slip off

All armrests have passed the BIFMA test

## Standard model

Fixed armrest

Distinctive rounded armrest surface

## 3D armrest

Armrests can be lifted/moved/rotated to meet various scenarios such as office work, leisure, communication, and lunch break, avoiding the numbness caused by hanging arms in the air.

Eight-level height adjustment

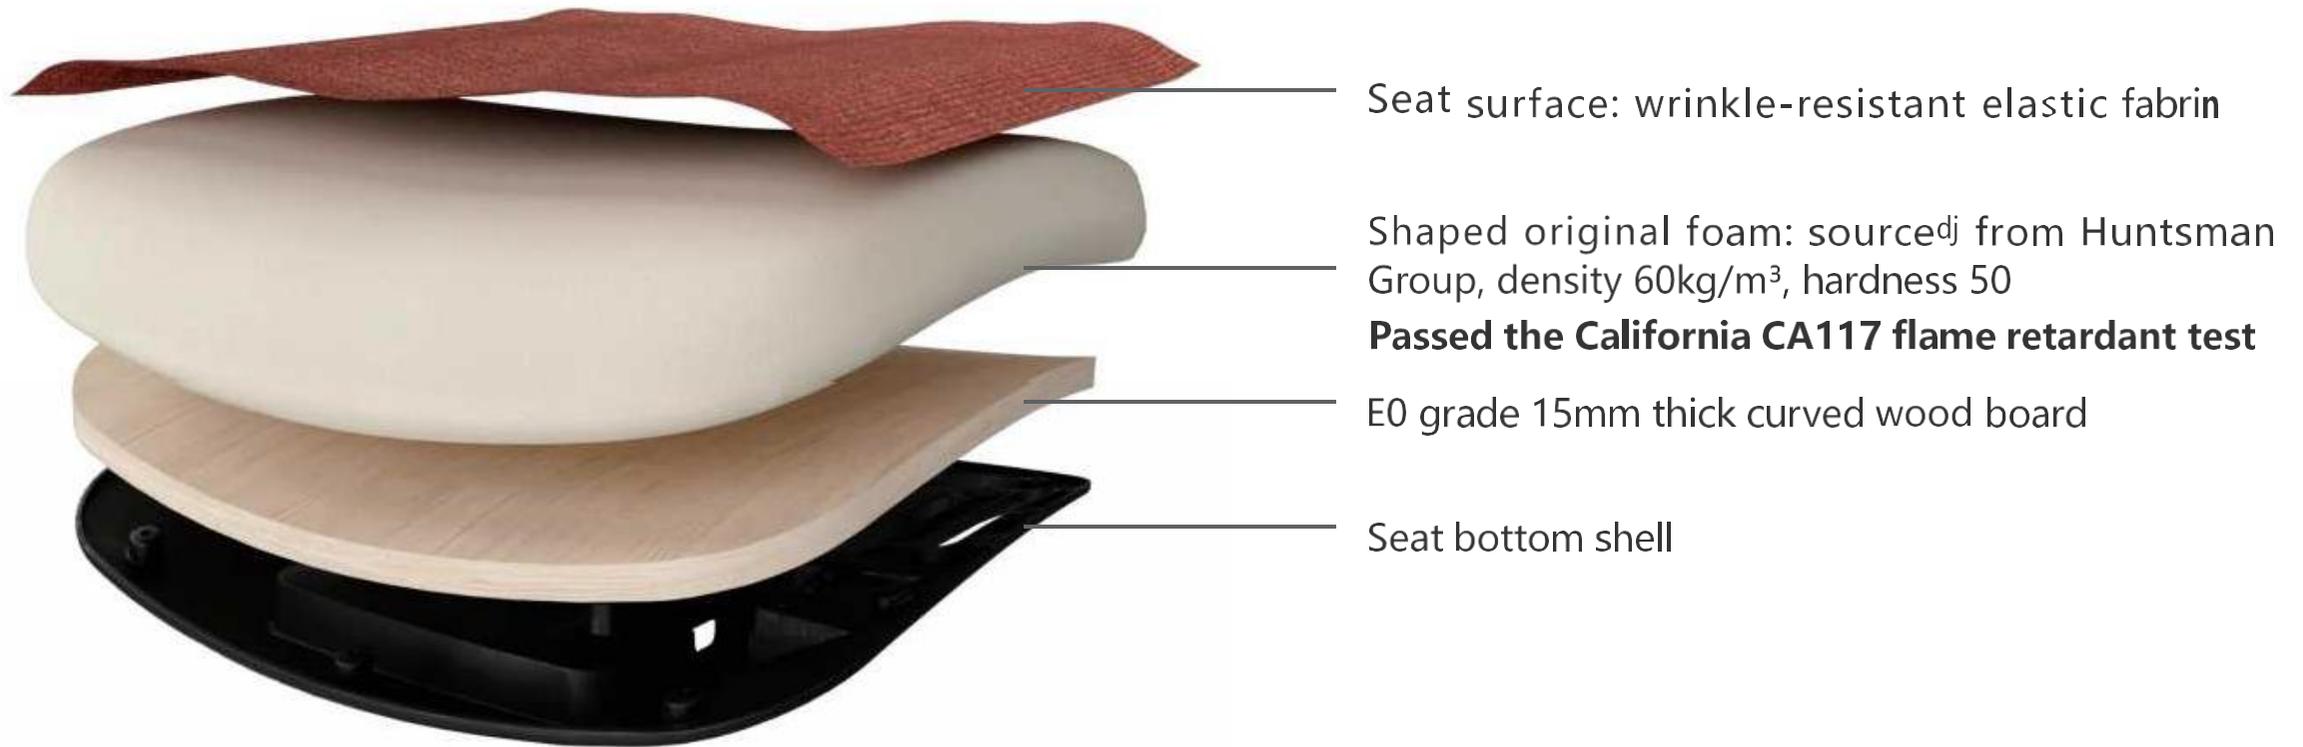

Front and back movement  
Left and right rotation

## Comfortable cloud-like sitting experience

High-density shaping cotton, no collapse after sitting for a long time

Good blood circulation in the lower limbs after sitting for a long time without numbness

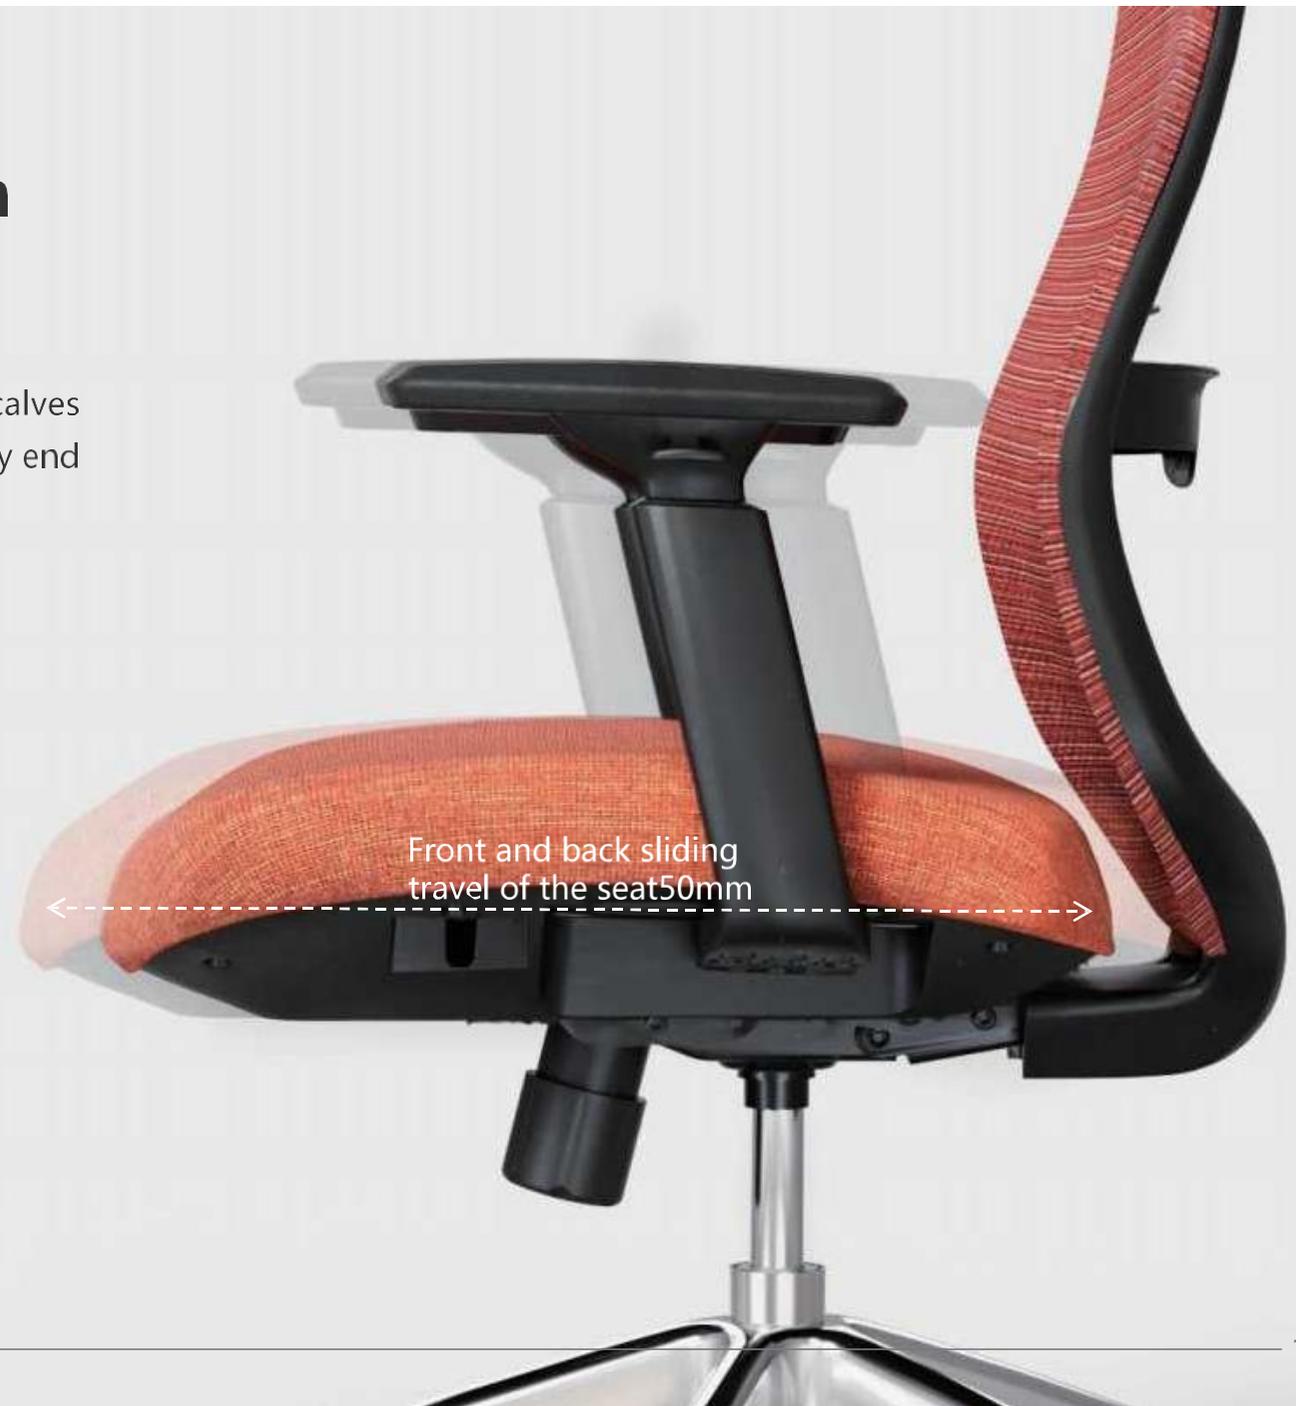

## Adaptive support seat cushion

The seat cushion can slide back and forth to accommodate people of various heights and body types.

The arc-shaped double-curved surface fits the buttocks, the calves are naturally vertical without squeezing the legs, making it easy and comfortable to sit for a long time.

Upward push to unlock and slide

## Comfortable and carefree recline

The chair back can swing back and forth; shake it back when tired to lie down and relax. Multiple recline angles are available to meet the needs of different groups of people.

A: Lock in place B: 3 positions 21° C: 4 positions 28°

The recline spring tension knob can be tightened/loosened.

Push left: Lock  
Pull back: Release

The entire chair passes  
the BIFMA test

# BIFMA

## Smooth lifting, safe and stable

Three-stage explosion-proof gas spring

BIFMA test certification

Lifting stroke 100mm

Parco

Source wall

**"An era of enhanced collaboration"**

"In a workplace oriented towards innovation, emphasizing collaboration and social interaction, the model of people + space has evolved into people + space + information. In this model, the quality, quantity, and level of interaction of different types of information fundamentally determine the organization's decision-making quality, innovation level, and research and development efficiency."

From this perspective, supporting tools and environments for collaborative information exchange are critical issues to address, and Beiter whiteboards are a series of products designed specifically to solve this problem.

# SOURCE WALL

A product that is frameless, allows infinite extension, and is reusable with magnetic fixation.

## Frameless design

The frameless design allows the whiteboard to extend infinitely, creating a seamless visual effect no matter how large or long it is. Depending on the task requirements, you can choose the appropriate size of the wall space and then select the corresponding number of Source Wall whiteboards. This transforms unused wall space into a place for teams to collectively express and share ideas.

## The frameless design supports diverse ways of presenting information.

Whiteboard markers for writing, magnets for attaching photos or paper documents, sticky notes for quick notes, and projectors for digital presentations—all these methods offer simple and direct ways to display, interact with, and modify information. No specific technical support or training is needed, making it easy for everyone to use.

## Simple wall mounting methods

The Source Wall whiteboard uses magnetic attachment for wall mounting, providing a simple installation method with convenient positioning. It allows for easy extension and contraction of the whiteboard width. The ease of disassembly and reassembly ensures high reusability. The magnetic installation method combined with precise edge cutting creates a visually appealing floating effect on the wall.

## Multiple size options

source wall whiteboards come in three standard sizes:

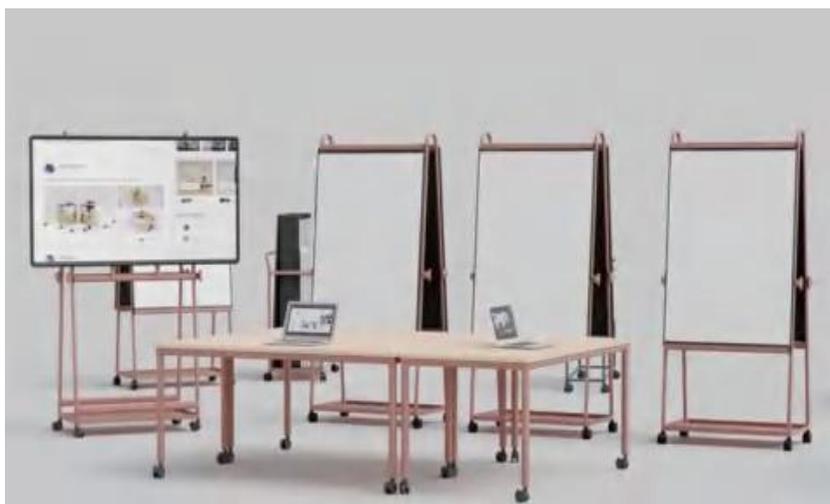

- 1180mm \* 2040mm (rectangle with rounded corners on all sides or on one side)
- 1180mm \* 1180mm (square)
- 587mm \* 587mm (square)

These sizes allow for flexible combinations in various locations, from traditional environments such as private offices and meeting rooms to more innovative spaces like cafes, lounges, and corridors.

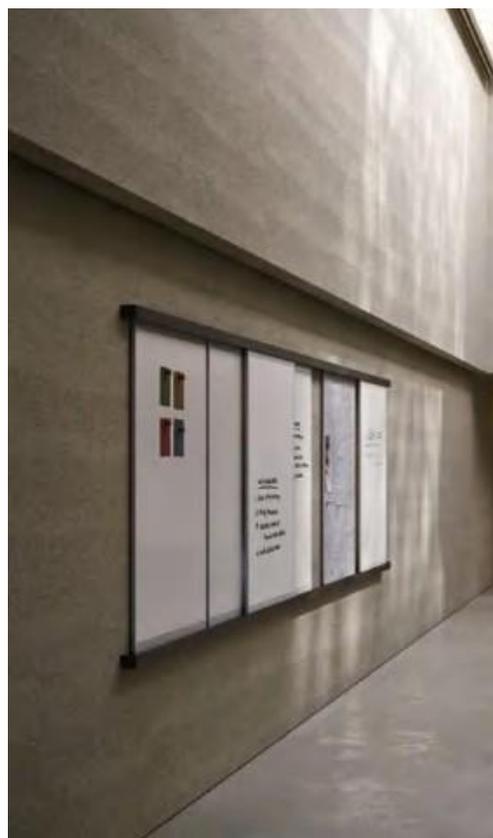

## SOURCE LIGHT

A lightweight, dual-sided, mobile whiteboard product that can be used anywhere with the help of tracks or stands.

### Collaborate anytime and anywhere

Collaboration can and should happen anywhere. By creating a variety of collaborative workspaces within an organization's scope—larger team spaces, more casual ad hoc spaces, and previously underutilized spaces—Beite Source Whiteboard allows team members to accomplish more work with others, regardless of where they are.

### Lightweight design

The lightweight design supports the movement of the whiteboard in multiple spaces. The movement of the whiteboard realizes the transfer of information on the whiteboard, supporting the transition of information from team collaboration to individual work, from cross-departmental collaboration to single department collaboration.

The PET backplane is integrally pressed, ensuring a comfortable grip during movement and effectively reducing the risk of damage and injury caused by the whiteboard falling off during the moving process.

### Diverse information display methods supported

The PET backplane + enamel steel surface brings a richer way of information display. The enamel steel surface can support whiteboard pen writing, magnet adsorption of pictures/paper documents, sticky notes overlay, and projector projection of digital files. The PET surface can use thumbtacks to fix graphics/paper documents. All these methods can be used in the simplest and most direct way for information display, interaction, and modification. No related technical support and training are needed, and everyone can use it easily.

### Double-layer track design

Source light's track adopts a double-layer track design, which can accommodate more whiteboards while supporting the parallel sliding of the whiteboard, realizing more information display in a limited space. It can completely preserve the process of information interaction and creative thinking, avoiding the impact of multiple wiping on the rhythm of collaboration.

It supports people to unlock more collaborative play methods for whiteboards, such as: two meetings held in the same meeting room at different times can each use a part of the whiteboard, allowing the content of the first meeting to remain unaffected without being wiped off, and not affecting the use of the whiteboard in the second meeting.

### Mobile stand design

Source light is also equipped with a mobile whiteboard stand. It supports the movement and spatial transformation of the whiteboard and the information on it in various spaces of the office, and is an indispensable collaborative weapon for agile office. The stand design supports the placement and storage of the whiteboard, as well as the hanging of TVs, further enriching the types of information display in the office space. The use of multiple mobile stands can also be used for internal space division of open spaces, combined with the natural sound absorption and noise reduction properties of PET material, to achieve acoustic optimization of open spaces.

# Formal teaching space

## Classroom

Students in primary and secondary schools spend much more time using desks and chairs than any other furniture (except beds). Therefore, focusing on the healthy growth of adolescents, the design of desks and chairs is essential. Whether it's the rationality of human-computer dimensions, ease of use, or even the cultivation of aesthetic education, the quality of desks and chairs plays a significant role.

With the improvement of living standards, more students and parents hope to use desks and chairs with higher aesthetic value, better quality, and more exquisite design. Schools, especially international schools, hope to attract excellent students through a good learning environment; at home, in apartments, parents also hope to provide their children with a learning environment similar to that of the school, allowing for a seamless connection between home and school learning environments.

# Thinkin desks and chairs

Thinkin signifies the embarkation of thought. We have observed a large number of desks and chairs, designing them with a people-oriented approach

and enhancing the student experience as the starting point. The overall design adopts a rolling language, with the downward curve at the front end of the desktop echoing the lines of the chair back, creating a simple and fashionable shape that is visually more concise and efficient.

In terms of color matching, a colorful configuration is adopted, with premium gray as the main tone, supplemented by low-saturation colors, breaking away from the market's long-standing overuse of high-purity youthful colors. This creates a more aesthetically pleasing spatial atmosphere for students, which not only helps to improve concentration during classes but also enhances the sense of belonging during their school years.

## le for multiple age groups

The desk height is adjustable to accommodate students of different heights from elementary to middle school.

Prevention of myopia period  
Suitable for ages 4-7

Spinal cord shaping period  
Suitable for ages 7-12

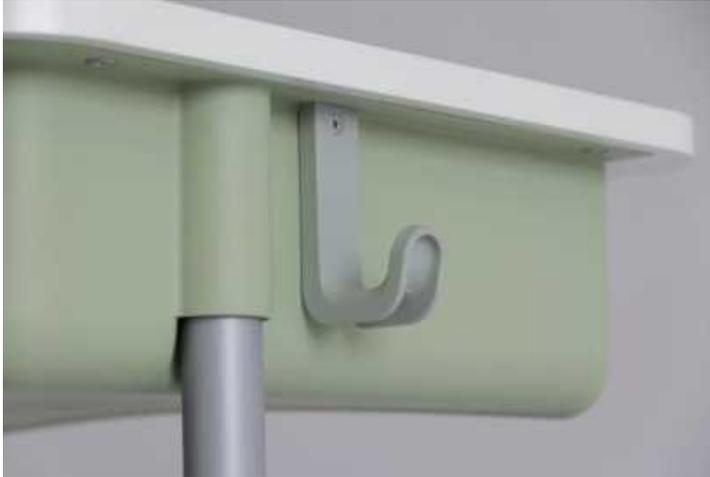

Healthy development period  
Suitable for ages 12-18

## Thoughtful safety

All sharp corners of the desks and chairs are rounded to make them safer for students to use

To meet the functional and aesthetic coordination of the product, there is an ultimate requirement for the bending process. The 5D bending angle is specially customized with bending molds.

## Storage space

To increase storage space, a detachable basket has been designed. The vertical basket makes more effective use of vertical space, and the slanted opening of the basket makes it more convenient for students to retrieve items. The downward-angled desktop design is also more friendly to the placement of hands.

The desk is equipped with a front-leaning basket and side hooks to meet students' needs for placing daily necessities and hanging bags.

## Comprehensive care

All plastic materials use brand-new polypropylene material, which is environmentally friendly, cold-resistant, anti-aging, and formed by one-time injection molding.

The table frame material uses high-quality cold-rolled tube, which has a smoother and finer surface, and is treated with electrostatic powder spraying on the surface.

The table legs are made of high-strength A380 aluminum alloy material, with a wall thickness of 3.5, formed by one-time pressing, and treated with electrostatic powder spraying on the surface.

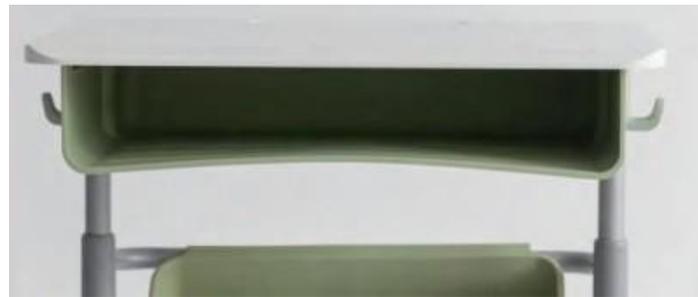

### Integrated edge banding:

Rounded and smooth edges and corners are not afraid of bumps and collisions

### Bookend:

1. Ultra-large capacity design, easily accommodates a large number of books/stationery.
2. Internal groove design to prevent small items from rolling off.

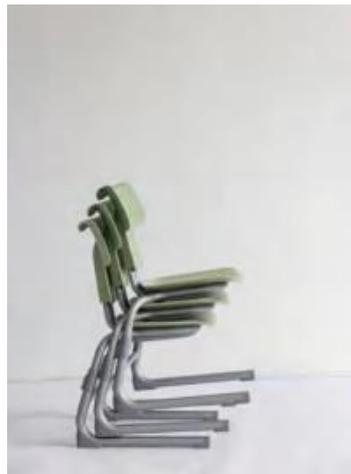

### Pen slot design:

Organizes pens to prevent them from falling out

## design

Chairs can be nested to reduce transportation and storage volume

## backrest conforms to the spine

The backrest flange design ensures structural strength while reserving space for height adjustment in the backrest. Students can adjust to a suitable leaning height according to their body size. It can shape different sitting postures and care for the healthy growth of students.

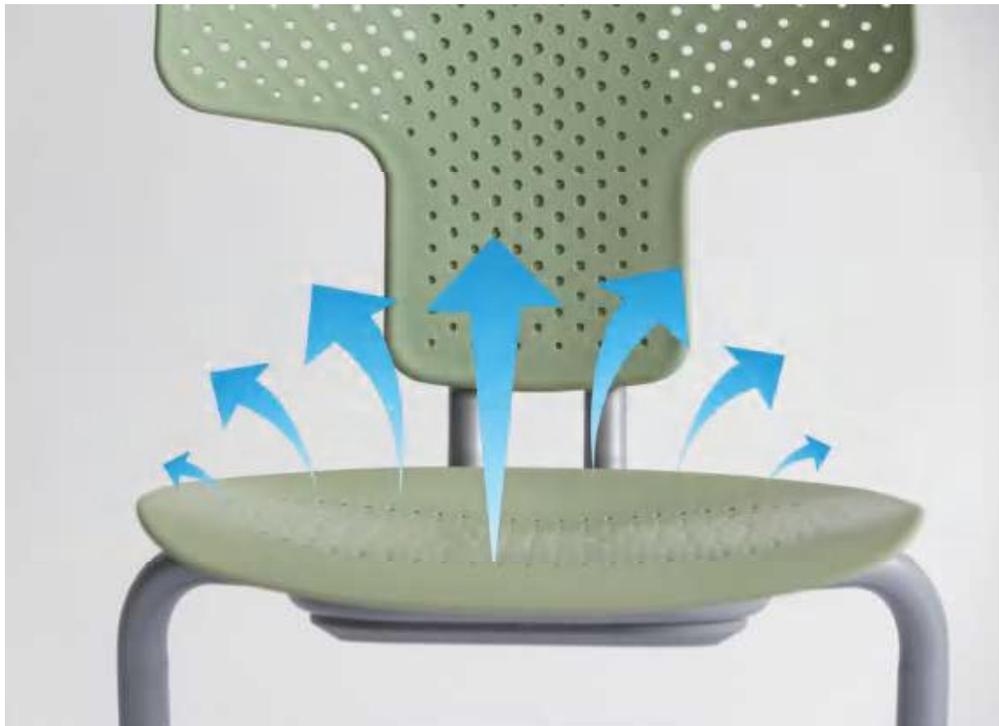

The rolled-backrest design provides a handle position for easy lifting from behind.

## le and comfortable

The seat is breathable and comfortable, with a "slim waist" between the backrest and seat surface for easy straddling.

The chair can be inserted into the tabletop, making it more convenient to clean. The rear legs of the chair are designed to effectively hang the chair on the tabletop, which facilitates cleaning in the classroom. The chair can be fully pushed under the table.

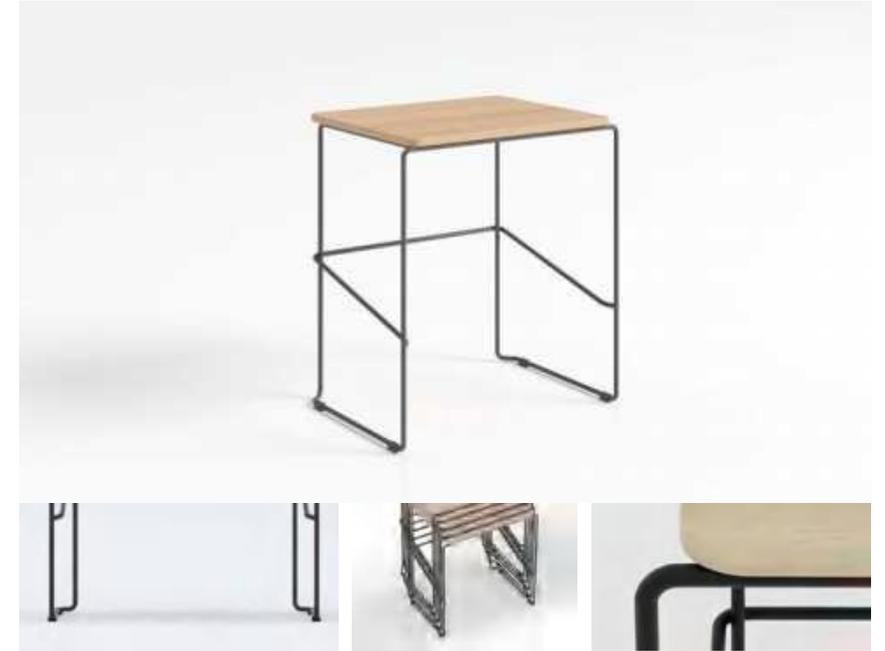

The chair frame adopts a cantilever structure. To solve the problem of students bumping their feet under the desk, multiple tests have been conducted to verify that by removing the horizontal crossbar under the desk legs, the stability of the desk is still ensured.

# Wenqu QUETH desk

Lightweight and portable, allowing you to move freely

Easy to lift and carry, making daily life more convenient

### Stable structure

Uniform force distribution with a trapezoidal mechanical structure, widened arc-shaped legs for support, aesthetically pleasing while maintaining table stability, providing a smooth writing and office experience

### Stackable

Saves space when not in use  
Lightweight and easy to move

Round table corners replace sharp edges for greater safety  
**Thoughtful safety**

# Wenxue STUTH desk

Lightweight and easy to move, allowing you to go wherever you want

Easy to carry, making daily life more convenient

Adjustable height 610-760mm, with a total of 6 positions

Invisible stability  
Rational structure, sturdy and durable

Bold round legs provide stability without wobbling

Tables can be joined together to form different shapes

## Informal teaching space Library

### Bookcase

The combination of steel frame and wooden board is beautiful and durable.  
The steel frame serves as support and bearing, stable and not easy to deform.  
The exterior design is transparent and elegant, with a wooden frame that adds a warm texture to the bookshelf.

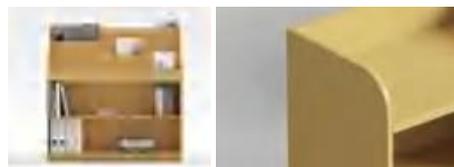

Double-sided design  
Ultra-large storage space

Thickened steel plate  
Easily bears 200kg per layer

### Fixed bookshelf 01

Can be arranged in multiple combinations.  
Can be placed against a wall on one side, or back to back in an island format.  
Multi-level classification meets both storage and display needs for books.

Multi-level classification storage  
Books and miscellaneous items are all collected in the bag.

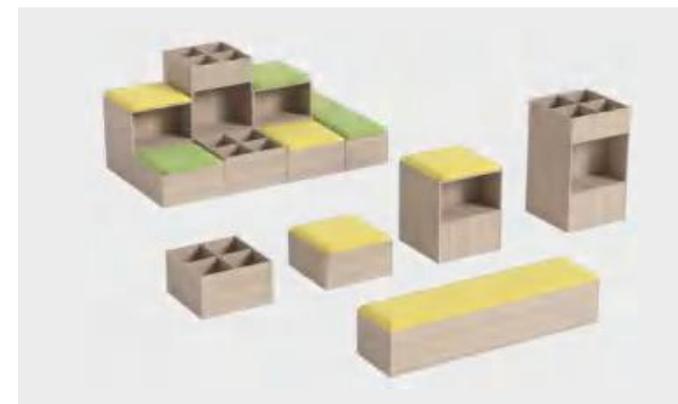

Safe and rounded corners  
Not afraid of bumps and bruises

### Fixed bookshelf 02

Island height bookshelf  
Books can be placed on all four sides,  
Maximizing the use of three-dimensional space.

### Fixed bookshelf 04

Flexible layout Composed of four modules that can be freely combined into different forms to meet different usage scenarios.

High elasticity sea-woven soft package The soft package is soft and comfortable, making it tiring to sit for a long time.

## Library

### Stacked bookcase

Modular design, freely build interesting spaces. The cabinet can hold books, backpacks, and some larger items.

Changeable magic cube, composed storage  
Inspires spatial art, builds your own style

Free stacking makes storage more interesting  
Combine and place according to need, rich in sense of layering, making storage no longer bound by space

Widened depth for easy placement of items  
Spacious depth of about 30CM, easily accommodate large books and decorations, placing items freely without limitation

### Mobile bookshelf

Universal wheels with brakes, can move flexibly, expanding the range of use. Compact, small footprint

Mobile bookshelf01

Mobile bookshelf02

Enjoy the quiet moments with books  
The flexible storage rack is easily pulled when needed, serving you at any time

Flexible movement with foot-brake universal wheels  
360° moving wheels

Compact design fits anywhere  
Occupies only about 0.11m<sup>2</sup>, just a small piece of space needed
